TERMINAL EXCHANGE SURVEY

If your organization is interested in exchanging a Delta Data 8260 terminal (white) for a 3270 PC/AT or a 3179G terminal please fill out this form and return it to OIT/ESG/ID. To assist you in making your decision please note the general characteristics of these devices as given below. A final determination of the exchange will be made after the survey is returned.

3270 PC/AT - Provides general PC support, a large number of PC programs will run on this machine. It also is a good 3270 terminal. As a 3270 terminal there maybe new applications available to you. The Control Program in the 3270 PC/AT allows switching between PC and host sessions. If you need to be attached to the host and also run PC programs then the 3270 PC/AT is a good choice. If your host applications use CAM, a software package has been developed to make the 3270 PC/AT operate with the CAM commands as a Delta Data 8260 did. You can try your application by contacting Al Winter on x26036.

3179G Terminal - This is a mid-range 3270 type terminal. It supports color and host graphics (i.e. general office graphics such as bar and pie charts). A local color printer and a mouse may be attached (not part of the exchange plan). If your needs are just for host access, AIM included, then the 3179G terminal is a good choice. This terminal WILL NOT support applications requiring CAM or host-based WP, but is excelent for VM and most commercial applications.

It is currently planned to attach both devices to the host via the PBX therefore, to participate in this exchange you must be in Headquarters.
